

Building a consultation and support program for student course registration at the Faculty of Information Technology - University of Information Technology & Communication.

Do Viet Anh

Abstract: This topic aims to address the issue of student course registration at the Faculty of Information Technology (IT) by building an advisory and support system. The main objective is to improve the experience and efficiency of the student course registration process. Through theoretical and experimental research, the topic applies modern technologies to create a flexible solution that meets the diverse needs of students. The expected results will contribute to enhancing the quality of education at the IT Faculty by optimizing the course registration process.

Keywords: academic advising, student support system, course registration, information technology, process improvement
