

Building an English teaching support system for Thai Nguyen University using the PHP Laravel Framework

Pham Minh Cuong

Abstract: In the context of higher education increasingly focusing on the application of information technology in teaching, this project aims to build a teaching support system for the English subject at Thai Nguyen University. The project combines theoretical research with experimentation to develop the system based on the PHP Laravel Framework. The objective of the project is to create an advanced technical platform for teaching and learning, thereby improving teaching effectiveness and enhancing the quality of student learning. The expected result is a flexible, easy-to-use system tailored to the specific needs of Thai Nguyen University, making a significant contribution to local educational development.
