

Research on solutions for displaying exercise data in an English teaching support system

Vũ Đức Dũng

Abstract: In the context of increasingly developed education, the effective management and display of assignment data play an important role in the English teaching process. This topic aims to build a solution for an English teaching support system, helping teachers easily track students' learning progress through transparent and scientifically organized assignment data display. The research method combines data management theory with application implementation experiments. The topic is expected to bring great value to the education sector through its ability to provide useful information and enhance teaching effectiveness.

Keywords: Teaching support system, assignment data management, educational technology
