

Building an English communication learning application on the Windows Phone operating system

Tran Trung Hieu

Abstract: In the current context, mastering English communication skills is an important requirement for workers in many fields. This topic aims to address the shortage of effective learning applications on the Windows Phone operating system by building an application that supports self-study and practice of English communication skills. Through theoretical research combined with practical implementation, the goal of the topic is to develop a suitable solution to meet user needs. The expected result is the creation of an easy-to-use, effective, and flexible application on the Windows Phone operating system, contributing to improving the English communication skills of the community.

Keywords: English learning application, Windows Phone, communication skills
