

Building a Digital Library program for students of the University of Information and Communication Technology, Thai Nguyen.

Do Duc Huy

Abstract: In the context of the rapid development of information digitization, this topic focuses on building a digital library system to serve the document retrieval and management needs of students at the University of Information and Communication Technology, Thai Nguyen. The objective of the research is to design and implement a program that improves the efficiency of information use while enhancing the quality of education. The research method applies a combination of traditional library management principles with modern digital technology. The expected results of this topic not only provide a practical solution for the specific needs of the school but also contribute to promoting the digitization trend in the education sector.
