

Building an online programming course registration website for ATC Vietnam Technology & Media Joint Stock Company

Vu Duy Tung

Abstract: The topic aims to design and deploy a website system to support online programming course registration for ATC Vietnam Technology & Media Joint Stock Company. This is intended to meet the need for enhancing information technology skills among company employees, while also expanding learning opportunities for other audiences. Through the research and implementation process, the topic applies modern web design principles combined with software development methods to ensure the website's effectiveness and ease of use. The expected results will bring significant benefits to both the company and participating learners.

Keywords: Online programming website, Information technology, Web application development
