

Building an online lecture system for Nam Tien Hai High School - Tien Hai - Thai Binh

Ngô Đức Hải

Abstract: In the context of increasingly popular digital education, this topic focuses on building an online lecture system to enhance the quality of education at Nam Tien Hai High School. The goal is to design and implement a digital learning platform to provide rich and flexible learning content for students. The research method combines educational theory with experimentation to build the system, while also emphasizing the evaluation of the system's effectiveness through feedback from lecturers and students. This topic is expected to contribute to the development of online learning models in Vietnamese high schools.

Keywords: Online lecture system, digital education, learning platform, education quality, high school
