

Building an online English learning website

Nguyen Thi Lien

Abstract: In today's context, the demand for communicating and working in English is increasing. This topic focuses on building an online English learning website to meet the needs of learners everywhere. The goal is to create an automated learning curriculum system with multiple lectures, exercises, and supporting tools to enhance users' language skills. The research methodology includes analyzing community requirements, designing the user interface (UI/UX), developing, and testing the system. This topic not only contributes to effective access to online learning but also helps optimize the English learning process.

Keywords: English learning website, online, digital education, web development, learning automation
