

Build a music streaming and online video sharing program.

Luc Van Long

Abstract: In the digital era, listening to music and sharing videos online have become an indispensable part of daily life. This topic aims to build a system that integrates both features, meeting users' diverse needs for entertainment and information exchange. Through theoretical research and experimental implementation, the goal is to create a useful digital platform that aligns with the development trends of modern communication technology. Expected outcomes include providing a robust and user-friendly integrated solution, contributing to the growth of the multimedia communication industry.

Keywords: listen to music online, share videos, digital platform, multimedia system, digital
