

Building an E-commerce Exchange Platform on the Yii2 Framework

Doan Van Tan

Abstract: In today's business reality, building an effective e-commerce system is essential. This topic focuses on developing an e-commerce trading platform using the Yii2 Framework to optimize operational processes and enhance user experience. Through a combination of theoretical research and experimentation, the topic aims to build a stable, secure, and easily scalable system. The expected results will provide businesses with an effective online business solution, contributing to the development of information technology in the e-commerce sector.

Keywords: E-commerce, Yii2 Framework, Trading system
