

Git application for online working groups and Web application development projects

Tran Van Dan

Abstract: In the context of the increasing demand for online collaboration, Git has become an indispensable source management tool in the field of Web application development. This topic aims to research and apply Git for online working groups to improve performance and collaboration among members. The research method is based on a combination of text analysis and practical deployment with a sample system. The expected result is to provide an optimized solution for the Web application development process for online working groups, contributing to enhancing work performance and product quality.

Keywords: Git, Web Application Development, Online Collaboration
