

Building an English learning application on Android

Nguyen Thi Ha

Abstract: In the modern context, learning a foreign language is increasingly important for personal development and professional specialization. This topic focuses on building an English learning application for the Android platform, aiming to provide effective methods to enhance users' language skills. The main objective is to design and implement an automated learning system, combining theoretical research in linguistics with experimentation on mobile applications. Through the development of this application, we expect to make a significant contribution to improving the quality of foreign language education through mobile technology.
