

Building a student record management program for Luc Ngan High School No. 4 – Bac Giang

Vi Van Hanh

Abstract: In the context of needing to improve management efficiency and support teaching and research activities, the study proposed building a student record management system for Luc Ngan High School No. 4 - Bac Giang. The approach combines theoretical research on data management with experimental implementation to develop an application suitable for the school's actual requirements. The project aims to contribute to improving the quality of student information management, enhancing operational efficiency, and supporting the comprehensive education process.

Keywords: student record management, data administration system, mobile application, Luc Ngan High School No. 4 - Bac Giang
