

Building a poverty management program for the Department of Labor, Invalids and Social Affairs of Bac Giang Province.

Do Thi Mo

Abstract: In the context where the poverty rate still exists in some areas of Bac Giang province, building an effective management program has become urgent. This study aims to research and implement an information management system for poor households, thereby proposing effective policy support solutions for the Department of Labor, Invalids and Social Affairs of Bac Giang province. The approach is based on combining current situation analysis with the development of a practical application system to improve management quality and policy support. The expected outcome is a highly applicable technological solution that contributes to improving the lives of disadvantaged people.
