

Building software to help children learn letters on mobile phones

Tran Thi Nghia

Abstract: In the context of modern education, the use of technology to support children's learning processes is an urgent need. This topic aims to develop a mobile application that provides interactive learning activities to help children easily access and learn letters more effectively. The research method combines theory with experimentation, thereby building a user-friendly interface and intelligent teaching functions. The expected result is a personalized educational solution that contributes to improving the quality of learning for children.
