

Learn about the PHP Laravel Framework and its application in building an Origami product sales website for Sunny store.

Nguyen Thi Giang

Abstract: This topic aims to research and apply the PHP Laravel Framework to develop an Origami sales website system dedicated to Sunny store. The current context demands high flexibility and efficiency in building e-commerce websites, where Laravel, with its advantages of clear structure, high security, and strong scalability, is considered an ideal choice. Through the process of designing and deploying the application, the topic will evaluate the effectiveness of using Laravel in building the website system. The expected result is to provide a suitable technical solution, helping Sunny store enhance the shopping experience for customers and optimize business processes.

Keywords: PHP Laravel framework, web development, e-commerce, Origami, store management
