

Building a program for the A1 class driver's license exam.

Vu Thi Phuong

Abstract: In the context of increasing transportation demand, developing a program for the A1 motorcycle license test has become an important requirement to ensure road safety. This project aims to design and implement a system for evaluating driving skills of learners before issuing licenses. The research methodology includes both theoretical analysis of license test regulations and practical surveys at driving training centers. Through this, the project seeks to provide a comprehensive solution that aligns with technical requirements and current legal regulations, making a significant contribution to improving the quality of training and management of driving licenses.
