

Building software to manage academic advising activities for students at the University of Information and Communication Technology - Thai Nguyen

Do Thi Huyen Trang

Abstract: This topic aims to meet the need for effective management of academic advising activities for students at the University of Information and Communication Technology (ICTU), Thai Nguyen. Through theoretical research combined with experimentation, the topic develops a software system to improve the quality of academic advising services, enhance the productivity of academic support staff, and assist students in their learning process. The expected results contribute to improving the efficiency of academic management at the university.
