

Building a book ordering website for Minh Phuong Bookstore - Son La

Nguyen Tuan Viet

Abstract: This topic aims to research and develop a book ordering website system suitable for the needs of Minh Phuong Bookstore in Son La. In the current context, online shopping is becoming increasingly popular in society, requiring the bookstore to have an online sales channel to enhance business efficiency. The objective of the topic is to build a website system that helps customers easily order books without having to visit the store. The research method includes analyzing requirements, designing the user interface, and deploying the application on a web platform. The expected result of the topic will be an effective website product that meets customers' book ordering needs, while also helping Minh Phuong Bookstore strengthen its business operations.
