

Research PHP language to build an online quiz website.

Nguyen Thi Nen

Abstract: In the context of the growing development of information technology and online education, this topic aims to research and apply the PHP language to develop an online test web system. The main objective is to create an effective, easy-to-use, and flexible learning assessment platform. The methodology combines theory with practice through technical analysis of PHP and user interface design for the system. Through this, the topic hopes to contribute to the development of digital educational web applications and improve the quality of online learning.
