

Learn PHP language and apply it to build a website for Thai Nguyen electronics supermarket.

Phan Văn Quang

Abstract: In the context of the strong development of information technology, building a website is an important part of improving business efficiency in supermarkets. This topic focuses on studying and applying the PHP programming language to build a website system for the Thai Nguyen electronics supermarket. The objective of the topic is to research the structure, characteristics, and practical implementation of PHP in web development; simultaneously build a sample website with basic features such as product management, product information display, and a user-friendly and easy-to-use interface. The approach combines theory and experimentation to ensure the quality of the website system. The expected results of this topic are not only a complete web platform but also contribute to enhancing students' PHP programming skills, meeting current digital demands.
