

Research on data mining algorithms & applications on recruitment websites in Vietnam.

Ngo Quoc Thai

Abstract: This topic focuses on exploring and analyzing modern data mining algorithms to support more effective recruitment processes on Vietnamese job websites. Through theoretical research combined with experimentation, the objective of this topic is to develop a data processing and analysis system suitable for the characteristics of the Vietnamese labor market. The expected outcome is to provide a technical solution that can be widely applied to improve recruitment quality and business performance.
