

Building a Template Sales Website for RDCMA Center (ICTU - Thai Nguyen University)

Đinh Đình Đồng

Abstract: In the context of the growing development of the internet and digital technology, building a professional website to sell templates has become a useful solution for the RDCMA center. This project aims to design and implement a website system that ensures high interactivity, good security, and ease of use. Through a process of theoretical research combined with experimentation, the project hopes to provide a new business solution for the center. It is expected that this system will contribute to improving business operational efficiency and raising awareness of web technology in the information technology education sector.
