

Building a Website for the RDCMA Center at the University of Information and Communication Technology

Ha Van Huan

Abstract: In the context of increasingly widespread digitalization, building a professional website for the RDCMA (Research Development Center for Media and Applications) is necessary to enhance management efficiency and promote research. The objective of this project is to develop a website system that effectively supports the center's operations, including features such as project management, document file management, and member collaboration. The research method combines web design theory with experimentation to ensure performance and meet specific usage requirements. The expected result is an advanced technical solution that contributes to promoting research and learning activities at the school.
