

# **Building a Device Management Website for the Faculty of Electronics and Communication Technology - University of Information and Communication Technology, Thai Nguyen University**

**Vu Phi Hung**

**Abstract:** In practice, managing equipment in the Department of Electronic and Communication Engineering always requires an optimal solution. This project aims to build an equipment management website to address this problem. Through research, combining theory with experimentation, the project has created an effective web system for the Department of Electronic and Communication Engineering. This is an important step in improving management productivity as well as enhancing the transparency of the department.

**Keywords:** Device management website, Faculty of Electronic Technology, Thai Nguyen University
