

Building a Network Device Management Website for Phổ Yên-Thái Nguyên Telecommunications Center using Codeigniter Framework 2.x

Do Thi Thanh Huyen

Abstract: This topic addresses the construction of a network device management website system to optimize the operation and maintenance process at the Pho Yen-Thai Nguyen Telecommunications Center. Through practical analysis and research on the center's functional and non-functional requirements, the topic selects the Codeigniter Framework 2.x to deploy the application. The research method is based on a combination of theory and experimentation to ensure efficiency in device management. The ultimate goal is to provide a modern technical solution to enhance productivity and minimize operational risks of the network system.

Keywords: Management website, Codeigniter Framework 2.x, Telecommunications Center, network device management, operational optimization
