

Building a computer sales website for Nhat Computer store.

Đỗ Quang Huynh

Abstract: This topic focuses on building a professional website system to sell computer products for Nhat Computer store, meeting management needs and enhancing sales revenue. Through theoretical research on modern web technology combined with practical implementation, the topic will provide a comprehensive solution including user interface (UI) design, data structure (DB), and effective web application development methods. The expected results of the project will not only improve the shopping experience for customers but also optimize the store's business processes, creating practical value in business practice.

Keywords: Website selling computers, Web technology, Nhat Computer Store, System architecture, Graduation project
