

Building a website for introducing and managing room reservations for Bao Trang Hotel - Thai Nguyen

Nguyen Viet Hung

Abstract: In the context of the rapid tourism development in Northern Vietnam, particularly in Thai Nguyen province, building a website to introduce and manage room bookings for Bao Trang Hotel has become extremely necessary. This project aims to develop a professional electronic information system to enhance the hotel's service quality and business efficiency. The research method combines both theory and experimentation, from analyzing user requirements to deploying the web application. The expected results will significantly contribute to improving the booking process while providing a feasible solution for other hotels in this field.
