

Building a management system for the V-League National Football Championship information.

Ngo Xuan Linh

Abstract: In the modern context, managing football tournament information has become an urgent issue for organizations and teams. This topic aims to build an effective information management system for the V-League National Championship, based on a research method combining theory and experimentation. Through analyzing historical tournament data and applying information technology, the topic expects to provide solutions to improve the quality of information management, thereby effectively supporting business decisions and team match strategies. The expected results will bring significant improvements in information management, meeting the practical needs of the sports industry.
