

Building an online discussion website for Dong Hy General Hospital - Thai Nguyen

Nguyen Van Luan

Abstract: In the context of increasingly advanced healthcare and digitalized information, building an online discussion website has become an important solution to improve the quality of medical services at Dong Hy General Hospital - Thai Nguyen. This topic focuses on designing and implementing a system that provides a discussion platform for doctors, medical staff, and patients to share health information, treatment experiences, and update new knowledge. The research methodology includes requirements analysis, user interface design, and web application deployment. The project aims to create an effective, user-friendly, and highly secure support system, contributing to improving the medical experience for patients and enhancing the professional capacity of medical staff.
