

Build an online English learning website

Hoang Thi Ly

Abstract: In the modern context, the demand for learning foreign languages in general and English in particular is increasingly high. This project aims to build a website system to support online English learning, meeting the flexible self-study needs of users from anywhere. Through theoretical research on website design and online English teaching methods, the project combines experimentation to create an easy-to-use interface with features such as video lectures, multilingual dictionaries, and interactive quizzes. The goal is to develop this system into a useful tool for both teachers and students, contributing to improving the quality of foreign language education in general in Vietnam.
