

Building a subject management application for the Department of Networks & Communications - Faculty of Information Technology, Thai Nguyen University of Information Technology and Communications.

Hoang Thi Ngat

Abstract: In the context of the growing development of information and communication technology, effective management of the Network & Communication department has become important. This project aims to build an online management system for the Department of Network & Communication, helping to optimize work processes and enhance students' learning performance. Through theoretical research on project management and experimental implementation of web technology applications, the project will provide a solution for data synchronization and communication between lecturers and students. The expected result is a user-friendly system that contributes to improving the competitiveness of the Faculty of Information Technology at Thai Nguyen University of Information and Communication Technology.
