

Building an online multiple-choice exam program for the University of Economics and Business Administration.

Bui Thi Theu

Abstract: This topic aims to research and deploy an online multiple-choice exam system to meet the modern educational needs of the University of Science, Technology & Engineering. The main objective is to build a technical solution that helps organize, manage, and effectively evaluate multiple-choice exams automatically and time-efficiently. Through theoretical research and practical implementation, the topic will provide tools to support more effective teaching and learning. Upon completion, this system will not only improve the quality of assessment and evaluation but also open up many opportunities for developing additional functions such as student data analysis.

Keywords: Online multiple-choice testing, exam management, educational technology, learning assessment, automated system
