

Building a mobile phone sales management website for Phổ Yên-Thái Nguyên Telecommunications Center using Codeigniter Framework 2.x

Nguyen Thi Thuy

Abstract: In the context of a rapidly developing telecommunications market, building an effective mobile sales management website system is necessary to improve productivity and meet customer needs. This project aims to design and deploy a website using the Codeigniter Framework 2.x for the Pho Yen-Thai Nguyen Telecommunications Center, helping to simplify sales processes and data management. Through a combination of theoretical research and experimentation, the project hopes to contribute a technical solution applicable in real-world telecommunications business practices, enhancing the competitiveness of the Pho Yen-Thai Nguyen Telecommunications Center in the market.
