

Building a patient management website for Dong Hy Hospital - Thai Nguyen

Trinh Van Truong

Abstract: This topic aims to research and design a patient management website system to support the operations of Dong Hy Hospital, Thai Nguyen province. It seeks to solve the problem of improving efficiency in health monitoring and patient information management, while providing convenience for doctors and residents in quickly accessing information. Through the implementation process, the system will be developed based on user-friendly design principles and compliance with data security standards. The expected outcome of the project is to provide Dong Hy Hospital with a more effective management tool, thereby contributing to improving the quality of community healthcare.
