

Build a website to introduce the campus images of Thai Nguyen University of Information and Communication Technology using Panorama technique.

Dao Van Tuyen

Abstract: In the context of increasingly promoting and managing information about educational institutions, this study focuses on building a website to introduce the campus image of Thai Nguyen University of Information and Communication Technology using Panorama techniques. The project aims to create a digital solution to enhance communication efficiency and information resource management. To achieve this goal, the study adopts an empirical approach combining theoretical research on Panorama techniques with web application deployment. The expected results will contribute to the development of digital solutions in the education sector, while providing a typical example of applying modern technology to school facility management.
