

Building a Dormitory Management Website for Thai Nguyen University of Information and Communication Technology

Nguyen Dinh Bac

Abstract: This topic focuses on building a Website system to effectively manage the activities of the dormitory at Thai Nguyen University of Information and Communication Technology (ICTU). In the context of the increasing demand for Internet use in education and daily life, this Website will provide an optimal solution for controlling and operating the internal dormitory. The objective of the topic is to develop a Web system with features such as managing student information, room usage history, and other support services. The research method applied combines theory on web architecture with practical application deployment. The topic aims to contribute to improving the quality of life for students and enhancing the efficiency of internal dormitory management.
