

Building an E-Learning Website for the Multimedia Communication Department, Thai Nguyen University of Information and Communication Technology

Nguyen Van Chung

Abstract: This topic aims to meet the increasing demand for online education in the context of rapid digital technology development. The objective of the topic is to build a specialized E-Learning system for the Multimedia Communications department, with the purpose of optimizing the learning and teaching process. Through a combination of theoretical research and experimentation, the topic will identify technical requirements and design an effective user interface. The expected outcome of the topic is not only a complete E-Learning system but also a contribution to improving the quality of online education at the school.
