

Building a Website for managing internship topics and projects for the Multimedia Communication Department, Thai Nguyen University of Information and Communication Technology.

Vu Van Ha

Abstract: In the context of the increasingly developing digital education, building an effective management website for internship topics and multimedia communication projects is an essential need. This project aims to create an optimal support system for the Multimedia Communication Department at Thai Nguyen University of Information and Communication Technology. Through theoretical research combined with practical application deployment, this project seeks to provide a technical solution to help manage, monitor, and effectively evaluate internship topics and projects. The expected results will contribute to improving educational quality while enhancing students' research capabilities.
