

Building an automatic news aggregation website

Nguyen Duc Hanh

Abstract: In the context of increasingly widespread digitalization of information, building an automatic news aggregation website system aims to meet users' needs for quickly updating information across various fields. The objective of this project is to design and develop a system capable of collecting, processing, and classifying news from diverse content sources. The research methodology includes both theoretical and experimental studies to establish a complete automation process. The project is expected to play an important role in providing high-quality information services to the community, helping users easily access and utilize information quickly and conveniently.
