

Building & deploying a VPN virtual private network system for the Campus network of Thai Nguyen University with the application of enterprise network security solutions.

Mai Thi Hien

Abstract: In the context of increasing threats from the internet, building and deploying a Virtual Private Network (VPN) system for the campus network of Thai Nguyen University has become extremely important. This project aims to design and implement a safe and effective solution, ensuring legitimate access and information security. Through theoretical research combined with experimentation, the project hopes to contribute to enhancing the protection of academic networks and provide an enterprise network security model for similar educational organizations.
