

Building a fast food ordering website for Le Pub Xuan Dieu - Tay Ho - Hanoi restaurant using Laravel Framework 4.x

Pham Thi Thu Hoai

Abstract: In the context of the growing e-commerce sector, fast food websites play a crucial role in improving customer experience and enhancing business efficiency for Le Pub Xuân Diệu restaurant in Tây Hồ, Hanoi. This project aims to build a website management system according to the restaurant's requirements, using Laravel Framework 4.x to ensure high flexibility and security. Through theoretical research and practical application deployment, the project seeks to provide a comprehensive solution for order management, menu display, and customer communication. The results not only meet specific business needs but also contribute to technological development in the food retail industry.

Keywords: Fast food website, Laravel Framework 4.x, e-commerce
