

Building an English practice application for children on the Android operating system

Trieu Thi Nga

Abstract: In the context of increasing demands for foreign language skills among students, this topic focuses on developing a mobile English exam preparation application specifically designed for children. The project aims to create an interactive and engaging learning system to enhance the effectiveness of review and exam preparation. Through experimentation, the study applies a combination of theoretical research and application development on the Android platform, aiming to explore factors affecting children's learning processes and optimize the English learning experience via mobile applications. This research hopes to contribute a useful solution to modern foreign language education.
