

# **Building the Vietnamese Calendar application on the Android operating system**

**Do Thi Nhue**

**Abstract:** In the context of the increasing demand for time management applications, this project focuses on building the Lich Viet application for the Android platform. The project's objective is to create a useful solution that helps users easily track and plan events in their daily lives. The research methodology includes requirement analysis, user interface design, application deployment in the Android Studio environment, and functional testing. This project not only provides an effective time management tool but also contributes to the field of mobile application development.

**Keywords:** Calendar app, Android, Time management, Mobile app development, App testing
