

Building an English multiple-choice test application on the Android operating system

Nguyen Dinh Phuc

Abstract: In the context of increasing demand for language learning and proficiency testing, this topic aims to solve the problem of building an English multiple-choice test application on the Android platform. Through a combination of theoretical research and experimentation, we aim to design and implement an effective application system that meets the needs of teachers and students. The expected results will contribute significantly to the development of digital education.

Keywords: Android application, English test, Digital education, Experimental deployment, Foreign language test
