

Building English learning software for students of Dai Tu Thai Nguyen High School.

Tổng Thị Tươi

Abstract: This topic proposes the necessity of developing a software system to support English learning specifically for high school students at Dai Tu High School, Thai Nguyen. The objective of the research is to build and deploy an application that improves the effectiveness of the self-study process for foreign languages. The method combines theoretical research and experimentation to identify requirements and design a system suitable for the learning needs of the target group. The expected results of this topic will bring significant benefits to enhancing students' language skills, while also contributing to the development of technological solutions in education.
