

Building an application providing admission information for candidates of the University of Information and Communication Technology – Thai Nguyen University on mobile devices.

Nguyen Ngoc Ha

Abstract: In the current context, accessing admission information at educational institutions has become more important and necessary than ever. This topic focuses on building a mobile application that provides admission information for candidates of the University of Information and Communication Technology – Thai Nguyen University, aiming to help them conveniently learn about majors, admission conditions, and admission regulations. The research method combines theory on application design with experimental product deployment. This topic holds significant meaning by providing a convenient solution for candidates, while also contributing to the development of information technology in education.
