

Building a personnel management program for the Education Publishing House on the WindowsPhone platform.

Nguyen Ngoc Sang

Abstract: In the context of increasingly complex human resource management, this topic focuses on building a professional human resource management system for educational publishers. The main objective is to optimize the management of information and activities of the staff. The research methodology includes both theoretical aspects of modern human resource management and experimental implementation of an application on the WindowsPhone platform. The expected results bring many benefits in improving work performance and service quality, while contributing to the development of human resource management technology.
