

Application of WebGIS technology to build a management program for bus stops in Thai Nguyen city.

Ha Thi Thom

Abstract: In the context of increasing demand for bus services, this study focuses on applying WebGIS technology to develop a management system for bus stops in Thai Nguyen City. The main objective is to build a solution that supports information on routes and locations of buses, aiming to optimize travel processes and provide better services for local residents. Through research and practical implementation, the study hopes to contribute to the development of an efficient and sustainable public transportation system.
