

Application of WebGIS technology to build a food service map in Thai Nguyen city

Nguyen Thi Lang

Abstract: In the context of the increasing demand for information about dining services, this topic aims to address the issue by applying WebGIS technology to build an online map system. The main objective is to develop and deploy a system that provides detailed information on the location, quality, and prices of restaurants and eateries in Thai Nguyen city. The research method combines theory with experimentation to ensure the accuracy and efficiency of the system. This topic not only provides a useful solution for users but also contributes to the development of geographic information technology (GIS) in practical applications.

Keywords: WebGIS, food service map, Thai Nguyen city, practical GIS application
